6.3	Package L – medium projects	30–59 person-days	90	Platform evolution, integration of several systems.
6.4	Package XL – large projects	60+ person-days	80	Large-scale implementations, complex enhancements.

Package 6.x may include:

- development and enhancement of server-side software (integration modules, reports, business logic);
- development and enhancement of client applications and interfaces (web, terminals, cash registers, mobile);
- integration with external systems (service providers, billing systems, banks, CRM, etc. via API);
- UI/UX tuning and adaptation, localization, adding new scenarios and reports.

7. PayCenter technical support, maintenance and SaaS hosting

No.	Service	Terms	Price, USD
7.1	PayCenter processing hosting (SaaS)	1 environment, 1 payment system	setup 1,000 + 0.3% of turnover, min 125 /month
7.2	Standard technical support	support agreement	0.1% of turnover, min 125 /month
7.3	Advanced technical support	support agreement	0.2% of turnover, min 200 /month
7.4	Full administration (Enterprise)	support agreement	0.4% of turnover, min 300 /month
7.5	One-off work without support agreement	1 hour of specialist (min 2 h)	30 /hour

(The above are base support rates; support is usually discussed separately depending on project specifics, scope of work and other factors.)

8. General licensing terms

8.1 Prices are quoted in the settlement currency – USD. Payment method, payment currency and the exchange rate between the settlement currency and the payment currency are agreed separately.

8.2 Licenses are not cumulative. When upgrading to a higher license level, a new license of the respective level is purchased; paying only the price difference is not applied. To extend a license, an “Additional package” is used, if available for that product.

8.3 Backup servers.

8.3.1 The license is granted for one production environment (system) and includes the right to use one backup server (cold/warm) with the same configuration.

8.3.2 The backup server may only be used as a standby (for replication, high-availability testing and switchover in case of failure) and does not increase the licensed limit of points/devices.

8.3.3 For cluster configurations with multiple simultaneously active servers (active-active – both nodes simultaneously processing live traffic), a separate license is required for each active environment. *The base discount for licenses of an additional environment is 30%.*
